

# Iridocyclitis

This talk was presented by Dr. Brajesh Choudhary in the IMA Hall on 28-04-2002. Handouts were distributed.

## Classification

1. Uveitis -
  1. Anterior -
    1. Iridocyclitis (inflammation of the iris and ciliary body)
    2. Posterior (involvement of the choroid and the retina)
    3. Panuveitis (involvement of all the components)

## Iridocyclitis

1. Acute (less than 2 weeks)
2. Chronic
3. Acute recurrent

OR

1. Primary
2. Secondary
  1. Sclerouveitis
  2. Keratoiritis

## Salient features

### Symptoms

- Pain
- Redness
- Photophobia
- Watery
- Reduced vision

### Signs

- Vision
  - Diminution of vision
- Lid
  - Oedema
- Conjunctiva
  - Congestion
  - Ciliary congestion
- Cornea
  - Oedema
  - Haze
  - Descemet's membrane folds
- Endothelium
  - Dusting
  - KP's
- KP's
  - Fresh (whitish)
    - Small size
    - Medium size
  - Pigmented
  - Mutton fat
- Anterior chamber
  - Cells
    - Lymphocytes
  - Flare
    - Cells and proteins (exudate and/or transudate)
    - Grading 1 to 4
  - Hypopyon
  - Hyphaema
- Iris
  - Muddy (Kryps and fissures obliterated)
  - Heterochromia
  - Nodules
    - Koeppe (at margin)
    - Basacca
  - Occlusio pupillae (fibrin and inflammatory cells)
  - Synechiae
    - Posterior
    - Anterior (peripheral)
  - Seclusio Pupillae (iris bombe)
- Intra-ocular pressure
  - Low in acute stage or acute iridocyclitis
  - High later on
- Crystalline lens
  - Sub-capsular cataract to chalky white membranous cataract
- Vitreous, choroid, retina, optic nerve head
  - May be affected later on (pan-uveitis/complications)
  - Vitreous
    - Cells (lymphocytes/floater)
    - Hemorrhage
    - Anterior vitreous membrane (cyclitic membrane)
    - Vitreous band (?cyclitic membrane)
    - Tractional bands
  - Choroid
    - Nodules
    - Focal vascular Sheathing
    - Choroiditis

- Retina
  - Chororetinitis
  - Nodules, focal spots
  - Macular Oedema
  - Holes and Retinal Detachment
- Optic nerve head
  - Hyperemia
  - Blurring of disc margins
- Loss of vision/Loss of the eye
  - Phtisis bulbi
  - Quadrilateral eye
    - Bone formation
    - Malignant changes

## Aetiology

1. Idiopathic (Primary)
2. Allergic
  1. Extrinsic
    1. Long journey (wind, insects)
    2. Strong allergens
  2. Intrinsic
    1. Tuberculous antigen
    2. Leprosy
  3. Infective
    1. Bacterial
      1. Tuberculosis
      2. Syphilis
      3. Lepra
    2. Viral
      1. Herpes Simplex
      2. Herpes Zoster
      3. Rubella
    3. Fungal
      1. H. Capsulatum
      2. Candida albicans
      3. Coccidiomycosis
    4. Protozoal
      1. Toxoplasma gondii
      2. Toxocara canis
    5. Parasites
      1. Oncocerciasis
      2. Microfilarial
    4. Traumatic
      1. Non-penetrating (insect)
      2. Penetrating
      3. Other eye (sympathetic ophthalmia)
    5. Lens induced
      1. Phacolytic (hypermature cataract)
      2. Phacotoxic
      3. Phacoanaphylactic
    6. Local causes
      1. Scleritis
      2. Keratitis
      3. Corneal ulcer
      4. Orbital cellulitis
    7. Systemic and connective tissue disorders
      1. SLE
      2. Juvenile RA (Pauciarticular)
      3. Ulcerative colitis, Crohn's disease
      4. Sarcoidosis
      5. Psoriatic arthritis
      6. Wegener's granulomatosis
      7. Polychondritis
      8. Ankylosing spondylitis
      9. Still's disease
      10. Reiter's disease (urethritis, arthritis, conjunctivitis)
      11. Diabetes Mellitus
      12. NOT ASSOCIATED WITH RHEUMATOID ARTHRITIS/GOUT

## Diagnosis

The diagnosis is based on -

1. Symptoms
2. Signs
3. Investigations directed towards clinical suspicion
4. History (urethritis in Reiter's, Herpes Z, Vitiligo (VKH syndrome))
5. Blood (routine)
6. Urine - routine and microscopy
7. MT
8. CXR, X-ray Sacro-iliac joint and X-ray eye for intraocular FB
9. USG
10. ANA
11. ERG
12. FFA
13. Paracentesis
14. Vitreous aspiration
15. Specific tests -
  1. Skin test
  2. S. lysozyme (sarcoidosis)
  3. S. Calcium
  4. Protein electrophoresis
  5. FTA-ABS (Syphilis)

## Variants

## **Glaucomatocyclitic crisis (Posner-Schlossman Syndrome)**

Acute, unilateral, vague symptoms, signs minimal, but IOP up to 60 mm HG; attack for hours to days to months, between attacks all is normal, treatment is symptomatic only.

## **Fuch's heterochromic iridocyclitis**

Triad of

- Heterochromia
- KP's
- Cataract

## **Progressive facial hemiatrophy (Parry Rohmberg Syndrome)**

### **Ischaemic ocular inflammation**

- Acute anterior ocular ischemia
  - Squint surgery
  - RD surgery
- In Takayasu disease (pulseless disease)

### **VKH SYR. (Uveomeningitis)**

- Uveitis
- Meningitis (Headaches, neck stiffness)
- Auditory symptoms
- Exudative RD

## **Treatment**

1. Symptomatic
  1. Rest
  2. Dark glasses
  3. Atropinization
  4. Corticosteroids
    1. Oral
    2. Topical
    3. Local
      1. Sub-conjunctival
      2. Sub-tenons
        1. Anterior
        2. Posterior
    5. Immunosuppressives
      1. Azathioprine
      2. Cyclophosphamide
  2. Supportive
    1. NSAID's
    2. Immunostimulants
    3. Multivitamines
  3. Specific
    1. Antibiotics
    2. Antifungals
    3. Antivirals
  4. Surgery
    1. Iridotomy
      1. Sector - for pupillary block glaucoma
      2. Laser
    2. Other as per needed.
